Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Claim 4 is allowed;

The prior art discloses plurality of cross link multiplexers interconnected via set of interconnects from a plurality of interconnects and configured to receive and transmit data between the multiplexers and other devices as appropriate.

The prior art however fails to disclose a signal configured to be represented as a series of characters, and a character of said series of characters is configured to be represented as a first data bit, a second data bit, a first control bit, a third data bit, a fourth data bit, and a second control bit, and furthermore the cross link multiplexers having a fourth interconnect of said set of interconnects configured to convey said third data bit, a fifth interconnect of said set of interconnects configured to convey said fourth data bit, and a sixth interconnect of said set of interconnects configured to convey a

second control bit and said sixth interconnect is positioned substantially between said fourth interconnect and said fifth interconnect.

Claim 11 is allowed;

The prior art discloses plurality of cross link multiplexers interconnected via set of interconnects from a plurality of interconnects and configured to receive and transmit data between the multiplexers and other devices as appropriate.

The prior art however fails to disclose a signal configured to be represented as a series of characters and a character of said series of characters is configured to be represented as a first data bit, a second data bit, a third data bit, and a fourth data bit, and further the cross link multiplexers having a fourth interconnect of said set of interconnects configured to convey said third data_bit, a fifth interconnect of said set of interconnects configured to convey said fourth data_bit, and a sixth interconnect of said set of interconnects is configured to convey one of a first voltage and a second voltage wherein the first voltage is different from the second voltage and said sixth interconnect is positioned substantially between said fourth interconnect and said fifth interconnect.

Claim 18 is allowed;

The prior art discloses plurality of cross link multiplexers interconnected via set of interconnects from a plurality of interconnects and configured to receive and transmit data between the multiplexers and other devices as appropriate.

The prior art however fails to disclose a signal configured to be represented as a series of characters and a character of said series of characters is configured to be represented as a first data bit, a second data bit, first control bit, a third

data bit, a fourth data bit, and a second control bit, and further the cross link multiplexers having a fourth interconnect of said set of interconnects configured to convey said third data_bit, a fifth interconnect of said set of interconnects configured to convey said fourth data_bit, and a sixth interconnect positioned between the fourth interconnect and the fifth interconnect in a manner to reduce cross talk, and configured to convey one of the second control bit, a power supply voltage, and a ground voltage.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
